

Training to Perform

Automation College — Your Partner in Exceeding Performance Goals.

Honeywell's global training solutions can help maximize the return on your most significant investment — your employees. Our training solutions are designed to help your workforce become more productive and proactive, and deliver greater value to your operations. Honeywell's training solutions provide expert content that is targeted to your needs and delivered in the most convenient and cost-effective format.

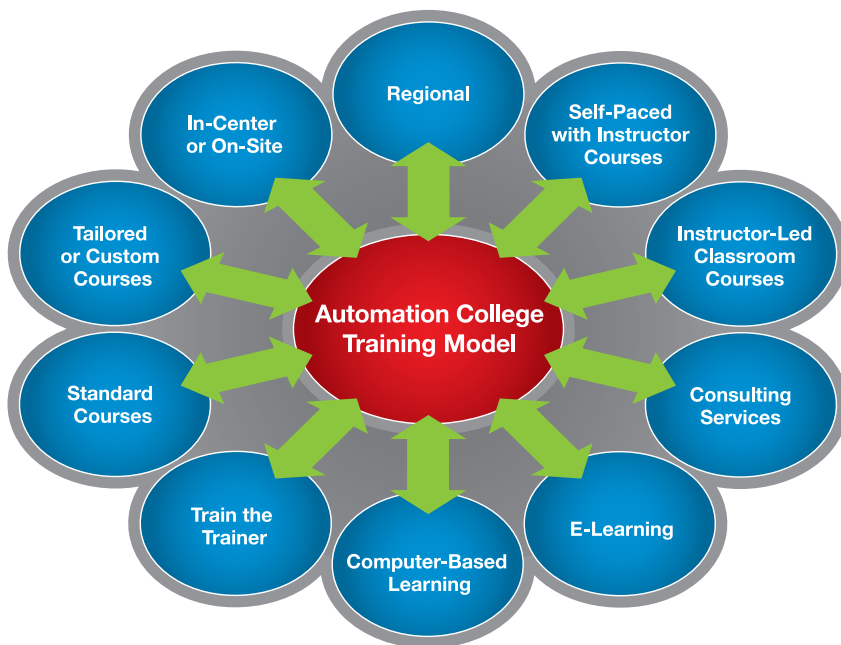

Automation College uses sound instructional methodologies to assess your performance needs, test and qualify skills, and develop and deliver standard and customized courses that fit within your project lifecycle and meet your specific process automation requirements. We can deliver training at our worldwide training centers or at your site.

Honeywell's Automation College provides training to help operators, maintenance technicians, implementation engineers, system administrators and plant management leverage the capabilities of your Honeywell system to maximize system performance.

As a result of the training, your workforce will be able to perform more efficiently, effectively and with a higher degree of confidence in:

- Plant operations
- System administration and installation
- System implementation
- System maintenance and troubleshooting
- Graphics building

Whether you are new to Honeywell, sustaining a legacy system, enhancing your current system, migrating to a new platform or require a unique skill set, Honeywell's Automation College will support your business strategies. Our expert trainers have more than 400 years of collective training expertise.

Honeywell makes the most of your technology investment through hands-on training solutions that enhance job-based skills to optimize site performance.

- Flexible and customized solutions
- Experienced and expert instructors
- Effective training solutions to enhance employees' skill sets

Maximize Your Automation Investment

Training is a key element of maximizing your automation investment. In order to keep your system and operators running at peak performance, engage Automation College early in your project cycle.

Automation College experts are available to participate in your training discussions to help define training requirements. It is also important to set aside a budget for training on a continuous basis to ensure operators, engineers, maintenance technicians, system administrators and plant management personnel stay updated on new functionalities.

Training When, Where and How You Need It

Whether you're an operator, a process engineer, a chemical engineer, a maintenance technician or plant manager, Automation College courses are specifically aimed at what you do, in the setting in which you do it. We offer free initial training consultation where our expert trainers will work closely with your staff to create a solution that meets your training needs.

In-Center Flex™ or Self-Paced Training

This training allows students to progress at their own pace in a self-study environment with frequent instructor learning checks. Students get hands-on experience with practical and real-world examples and exercises. Dedicated workstations and instructor assistance are available for each student. Courses can be modified to meet your exact job functions and expectations.

In-Center Instructor-Led Training

This training takes place in a classroom environment with a smaller group of students, each with a dedicated workstation. Students benefit from interaction with expert instructors and advanced methodologies.

Customized Courses

Automation College also offers customized courses at the customer site or at a Honeywell training facility. Honeywell can customize standard training materials to include information specific to the process automation system installed at your facility. Course materials are developed in accordance with your unique constraints and site requirements.

Create Value Through Training Solutions to:

- Improve employee performance
- Reduce cost of unscheduled downtime
- Minimize human errors
- Respond faster to issues

Tailored Courses

For on-site or in-center training, Automation College offers the option for standard training materials to be repackaged to meet learning objectives with course content for specific standard hardware and software functionality matching your system architecture.

On-Site Training Solutions

Honeywell's on-site training solutions eliminate the logistical barriers that often prevent site support personnel from getting the training they need. These affordable instructional programs integrate into your work environment, reducing travel expenses and time away from work. This is a very cost-effective way of providing training to a larger group of students whose normal work time or locations may prevent them from attending scheduled courses at a Honeywell facility. We bring the classroom to your facility with training equipment, database, materials and instructor.

E-Learning

E-Learning eliminates travel expense, minimizes time away from home and scheduled work, offers more flexibility in completing course work, and helps you complete training "just-in-time". Automation College offers four different types of e-Learning:

1. Virtual Training
2. Live Webinar
3. Recorded Training
4. Computer-Based Learning

Honeywell facilitators use the latest web conferencing technology to present training over the Internet directly to your work environment. E-Learning can be used as a single course to update skills or as part of a comprehensive training program.

Regional Training

We can bring instructor-led training solutions to a location near you for regional training with open enrollment or courses specific to your company.

Train the Trainer

Invest in your own internal training function with our Train the Trainer program, which prepares and certifies your staff instructor to conduct Honeywell licensed courses.

Global Training

Honeywell's Automation College has locations around the globe with local language capabilities and a variety of courses taught by qualified instructors.

- 19 Automation Colleges
- 20 Training Centers
- Over 110 certified instructors
- More than 150 in-center courses offered
- Courses cover multiple Honeywell solutions
- Average of 10,000 students trained annually

What Do Customers Say About Automation College?
