UK and Ireland News

Featured Solution

Investing in the Field: Despite the current downturn, it is a good time for manufacturers to make operational improvements. That's why Honeywell is adding to our measurement and control portfolio with strategic acquisitions such as natural gas measurement and control applications provider RMG. Coupled with our unmatched applications expertise, these solutions enable customers to plan and implement changes that reduce maintenance costs, improve plant reliability and enhance process performance.

Honeywell offers a comprehensive portfolio of instrumentation products which, combined with in-house software solutions and open interfaces for data access, help end users manage and even optimize enterprise assets.

New HC900 Interface

The 900 Control Station touch screen operator interface offers displays for both managing your process and supervising the operation of HC900 controllers. This combination allows data acquired by the controller to be viewed, analyzed, stored and exported by the station. Pre-built display widgets, matched to controller function blocks, are included to simplify setup and allow viewing and changing of setpoints, functions and actions. The new 900 Control Station 15" operator interface offers multiple language support and enhanced Station Designer configuration software.

OneWireless Update

Honeywell Introduces ISA 100.11a Ready Wireless Radar Gauge: Honeywell released the first ISA100.11a-ready wireless radar gauge that helps process manufacturers monitor tank levels and prevent hazardous incidents in their plants and terminals. [Read the press release](#).

Wireless Wins Award: Readers of Control Engineering magazine voted the Wireless FlexLine Radar Gauge as one of the Engineers' Choice winners. [Read more](#).

Featured Success Story

Honeywell Enraf Helps Shell Update Loading Terminals and Optimize Productivity

Shell looked to upgrade its fuel loading terminals with the integration of new controls, ethanol blending and additive injection systems. Shell turned to Honeywell Enraf to supply the main parts of the refurbishment program and provide a solution that minimized operational impact while optimizing productivity.
