## **Honeywell LETS Collects and Analyzes Efficiency Metrics from Virtually Any Machine.**

Line Efficiency Tracking Software (LETS) from Wintriss Controls Group is a scalable, flexible data collection and reporting tool that tracks critical production parameters including the metrics required by Overall Equipment Effectiveness (OEE). LETS automatically logs production information to a Microsoft

SQL database, from which key indicators can be extracted for use in ERP and Manufacturing Execution Systems (MES) software. Because of its modular, open-architecture design, LETS can be configured to communicate with virtually any machine. LETS provides a powerful report-generator as well as a browser-based viewer that displays machine status in real time.
